

PROTECT PERSONAL PROPERTY AGAINST MOLD & MILDEW ODORS

When the hermetically sealed package is opened and exposed to air, MustGo® is slowly released from the media changes from a solid to a vapor.

Working principle

When enclosed in a box, MustGo® vapor fills the surrounding space controlling and preventing musty odors caused by: mold, mildew, dampness & humidity. While enclosed MustGo® will last 12 months or longer depending upon temperature.

While MustGo® isn't known to stain or damage materials, it's highly recommended that a paper buffer be used between MustGo® and delicate or high value items.

Use Instructions

A grid can be downloaded from odorguru.com, which divides each MustGo® bar into 10 pieces of approximately equal size.

MustGo® bars are brittle and simply need to be scored with a sharp blade.

Place edge of bar on heavy line and neatly fold over.

Use a ruler or straightedge to guide the blade while cutting through the paper. [Be careful to avoid injury during cutting.]

After scoring, begin at one narrow end and snap into 5 sections.

Each section can then be separated into 2 pieces. If a piece breaks unevenly, no problem. Use the broken pieces, remember the product provides the protection neatness and appearance of the piece isn't important.

When separated into 10 approximately equal sized pieces, each piece will protect a standard sized moving box, file box or furniture drawer.
